

Claims

What is claimed is

1. A resilient, elastic, dimensionally dynamic mobile method of adhesive wood joinery complete in itself without fasteners, joinery millwork or supporting structures.
2. The joinery of claim 1 wherein the joints exhibit hinge like flexibility in many different directions.
3. The joinery of claim 1 wherein the individual wooden elements move freely and independently of each other.
4. The joinery of claim 1 wherein the adjoining edges of the individual wooden elements contact each other.
5. The joinery of claim 1 wherein the wooden elements joined are not displaced permanently by impact or expansion but are drawn back to their original position.
6. The joinery of claim 1 wherein the wooden elements joined need not be precisely milled or fitted for a perfectly tight joint to be formed.
